

11. The “Lines of best fit” procedure can be used to estimate the relationship between 2 variables. Match the “lines of best fit” picture to its procedure order number and description, using an arrowed line.

Picture		Procedure number and description
		<p>2. Mark out a set of points on the chart that reflect your data</p>
		<p>4. Draw a line through the shape you have drawn, that divides it evenly</p>
		<p>1. Develop a blank chart with x and y axis</p>
		<p>3. Draw a shape (usually an oval) that encloses all of the data points</p>
